

273. 卵形線ノ一定理

松村宗治 (台北大)

(定理) 對点ヲ擬似二重法線ヲ有セバ楕円ナリ.

(証明) $\gamma, \bar{\gamma}$ ハ對点トシ (Blaschke, IIヲ用ユ)

$$(1) \quad (\gamma' \gamma'') = 1, \quad K\gamma'(s) + \gamma'''(s) = 0$$

トオキ得, S ハ Affinbogen, K ハ Affinkrümmung
ヲアル。假定 = ヲリ

$$(2) \quad \bar{\gamma} - \gamma = \alpha \cdot \gamma'' = -\alpha \bar{\gamma}''.$$

$\bar{\gamma}, \gamma$ = 於ケル Affinevoluten \bar{y} ハ一致スル故 =

$$(3) \quad \bar{y} = \gamma + \frac{1}{K} \gamma'' = \bar{\gamma} = \bar{\gamma} + \frac{1}{K} \bar{\gamma}''$$

且ツ

$$(4) \quad \bar{y}' = \left(\frac{1}{K}\right)' \gamma'' = \bar{y}' \frac{d\bar{S}}{dS} = \left(\frac{1}{K}\right)' \bar{\gamma}'' \frac{d\bar{S}}{dS}$$

又 (2), (1) ヲリ

$$(5) \quad \frac{d\bar{\gamma}}{dS} - \gamma' = \alpha \gamma''' + \alpha' \gamma'' = -\alpha K \gamma' + \alpha' \gamma''$$

而シテ $\bar{y}' \parallel \frac{d\bar{\gamma}}{dS}$ ナル故 $\alpha' = 0, \alpha = \text{const} = \bar{\alpha} + 1$.

(5) ヲリ

$$(6) \quad \begin{cases} (\alpha K - 1) \gamma' = -\frac{d\bar{\gamma}}{dS} = -\bar{\gamma}' \frac{d\bar{S}}{dS}, \\ \alpha = \bar{\alpha} = \text{const}. \end{cases}$$

(1), (4) ヲリ

$$(\alpha K - 1) \left(\frac{1}{K}\right)' = -\left(\frac{1}{K}\right)' \bar{S}'^2$$

(6) ヲリ (2) ヲ用ヒテ

$$\begin{aligned} \alpha K' \bar{y}' + (\alpha K - 1) \bar{y}'' &= -\bar{y}'' \bar{s}'^2 - \bar{y}' \bar{s}'' \\ &= \bar{y}'' \bar{s}'^2 + \frac{\bar{s}''}{\bar{s}'} (\alpha K - 1) \bar{y}' \end{aligned}$$

故 =

$$\frac{d \log(\alpha K - 1)}{dS} = \frac{d \log \bar{s}'}{dS}, \quad \alpha K - 1 = \bar{s}'^2$$

$$\alpha K - 1 = c \bar{s}', \quad \bar{s}' = c \quad (c = \text{const})$$

又關ナル條件トシテ

$$c = \frac{d\bar{s}}{dS} = \frac{dS}{d\bar{s}} = \frac{1}{c}$$

$$\therefore \bar{s}' = c = 1, \quad \alpha K = 2 = \alpha \bar{K}$$

$$\therefore K = \bar{K} = \frac{2}{\alpha} = \text{const.} \quad \text{即チ証明完了。}$$
